PREOPERATIVE EXAMINATION OF ADULT PATIENTS BEFORE TREATMENT IN GENERAL ANAESTHESIA

Submit to your general practitioner.

- CBC (Complete blood count) + Leukocyte Differential Count (white blood cell count differential)
- APTT (Activated partial thromboplastin time)
- LFT (Liver function test)
- Internal preoperative conclusion
- For adults older than 50 years, EKG (Electrocardiography)
- For adults older than 60 years, X-ray of lungs

The tests can't be carried out more than 7 days before the operation. Bring the results of examination with you on the day of surgery.
